COURSE PLAN – PART II			
COURSE OVERVIEW			
<p>The dimensional control is the prime need for the product's defect free working. Hence metrology is the science of measurement, embracing both experimental and theoretical determinations at any level of uncertainty in any field of science and technology. To provide positive solutions for the uncertainty, the statistical inferences for the measurements is needed. The course metrology thus provides an overview about measurements, techniques, errors, precision, accuracy, statistical tools for quality.</p>
